SUMMARY

Final year Software Engineering student with hands on experience building and deploying AI/ML systems, including RAG applications, clinical ML models, and recommendation engines. Skilled in Python, TensorFlow, Scikit-learn, NLP, and scalable ML system design, with growing expertise in Generative AI, LLM applications, and currently exploring Agentic AI systems and autonomous AI workflows.

EXPERIENCE

Avartana Labs | AI / ML Intern

Nov 2025 – Jan 2026

- Trained and fine tuned 5+ ML models across regression, classification, and clustering; drove insight generation via feature engineering and EDA on complex datasets
- Deployed real-time prediction endpoints via Fast API REST APIs; worked cross-functionally with product and engineering teams to ship ML backed features

Tech Biz Solutions | Web Developer Intern

Jun 2025 – Sep 2025

- Built 4 responsive web applications using React, JavaScript, and MySQL; reduced page load time by 20% via component-level code splitting and lazy loading.
- Followed Git-based workflows and collaborative code review practices, maintaining 100% on-time delivery across all sprint cycles.

PROJECTS

RAG-Based PDF Intelligence System — Lang Chain · Chroma DB · MistralAI · Fast API · Streamlit

- Built an end-to-end RAG system supporting multi-format document ingestion with persistent vector storage using ChromaDB and MMR retrieval for improved answer relevance.
- 4 LLM providers (MistralAI, Groq, Google GenAI, OpenAI) behind a modular interface; production deployment via FastAPI/Uvicorn + Streamlit web UI
- Project Link - <https://github.com/Akshat-2809/RAG>

Heart Disease Prediction App — KNN · Scikit-learn · Streamlit · Python

- Clinical risk predictor using KNN on 11 health parameters; complete preprocessing pipeline (Standard Scaler, one-hot encoding, feature alignment) with real-time Streamlit interface
- Project Link - <https://github.com/Akshat-2809/FAI>

Movie Recommendation System — TF-IDF · NLP · FastAPI · Streamlit · TMDB API

- Built a content-based recommendation system using TF-IDF cosine similarity with precomputed matrices; FastAPI backend + Streamlit frontend + live TMDB API integration
- Project Link - https://github.com/Akshat-2809/Movie_Recommendation-

SKILLS

ML / AI: TensorFlow, Scikit-learn, ML Algorithms, LSTM, NLP, Feature Engineering, EDA

GenAI: LangChain, RAG Pipelines, ChromaDB, OpenAI API, MistralAI, Groq, Google GenAI, Prompt Engineering

Languages: Python, JavaScript, SQL, HTML, CSS

Web & APIs: FastAPI, Streamlit, React, Next.js, REST APIs, Uvicorn, MySQL

Tools: Git, GitHub, Jupyter Notebook, AWS, VS Code

EDUCATION

University of London

B.Sc. Software Engineering · London, United Kingdom

Expected Oct 2026

Delhi Public School

High School · Jodhpur, India

March 2022

CERTIFICATIONS

IBM AI Engineering Specialization · IBM Data Science Specialization · GenAI Powered Data Analytics · AWS: Getting Started with Machine Learning · Cloud Identity
