Subject: Application for AI Intern – Rotor Performance

Dear Hiring Manager,

I am writing to apply for the AI Intern – Rotor Performance role at Siemens Gamesa. As a Software Engineering student specializing in Machine Learning and Data Science, I am particularly interested in applying AI driven automation to engineering analysis frameworks within the renewable energy domain.

I have hands-on experience developing predictive models and building ML-based systems using Python, TensorFlow, and Scikit-learn. My work has involved data preprocessing, feature engineering, model validation, and deploying inference pipelines using FastAPI. I am comfortable working with structured codebases, version control systems, and analytical workflows, skills that align well with enhancing and automating technical engineering frameworks.

What particularly attracts me to this role is the opportunity to contribute to scalable, well-documented tools that support aerodynamic performance analysis. I enjoy building systems that improve efficiency, strengthen validation workflows, and enable collaboration across engineering teams.

I am fully available to relocate to Bangalore and work on-site for the internship duration. I would welcome the opportunity to contribute to Siemens Gamesa's innovation in sustainable energy systems.

Thank you for your time and consideration.

Sincerely,

Akshat Negi
